### Abstract

Fifty broiler rabbit business were divided into five groups based on their age at weaning (3,4,5,6 and 8 weeks of weaning as group I, group II, group III, group IV and group V respectively). The average daily gain in the given group was 17.71, 18.64, 19.00, 20.86 and 21.07 gm/day respectively at the end of 12 week of the study. It was inferred that the difference was non-significant and also no significant difference was observed between the sex.
